Matched model verification: all modes, both transported frames, and FC cutoff
Bend
Symmetric stretch
Antisymmetric stretch
QP energies
Relaxed TDA
Frozen projection
Transported HF Fock
AD vs reconverged difference / Eh Q⁻¹
Mass-weighted displacement dQ
Raw cutoff checks: probabilities are not renormalized
Largest raw Poisson tail
Largest spectrum change, both widths
Raw-tail target 1e-10
Spectrum-change target 1e-6
Dimensionless error
Maximum total vibrational quanta
