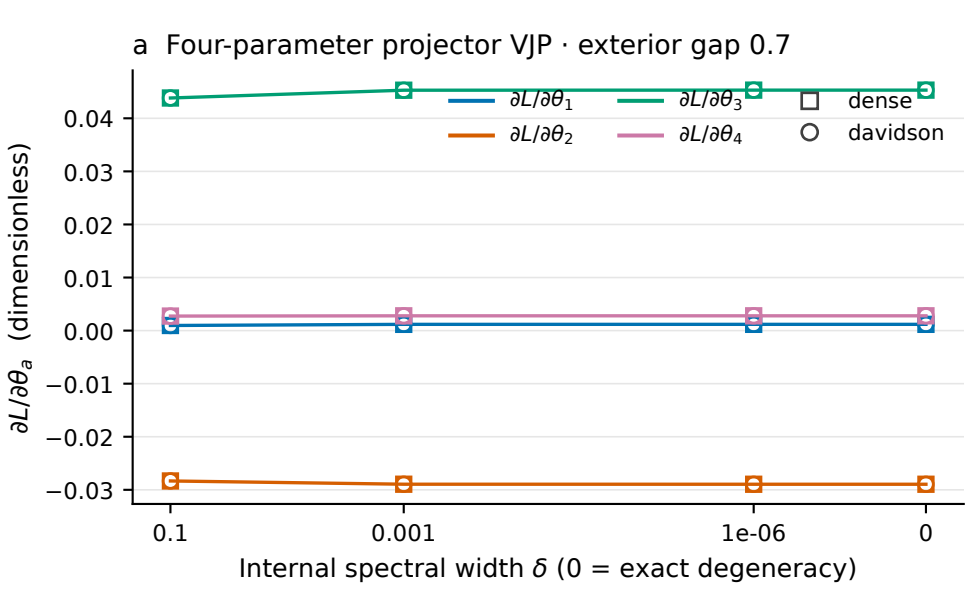
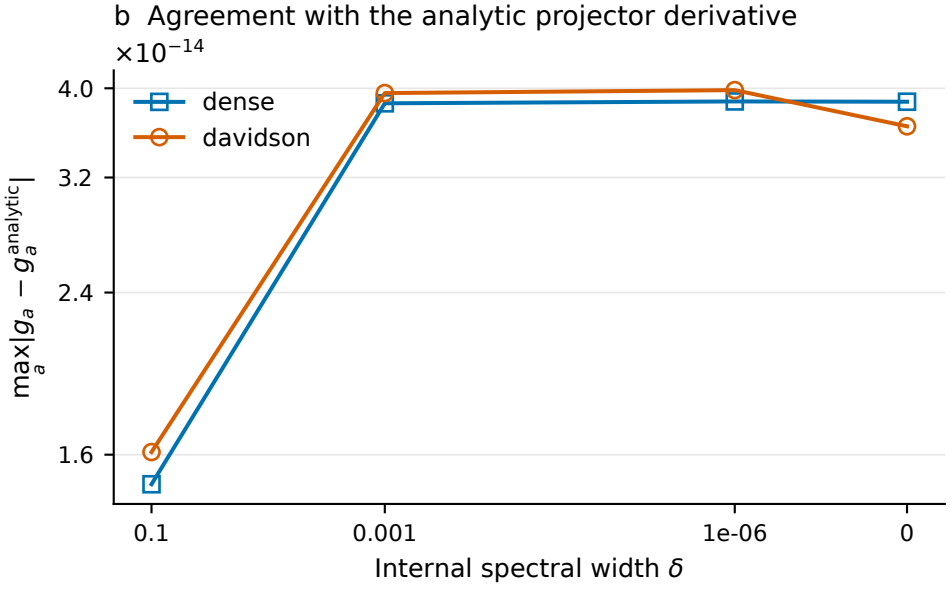
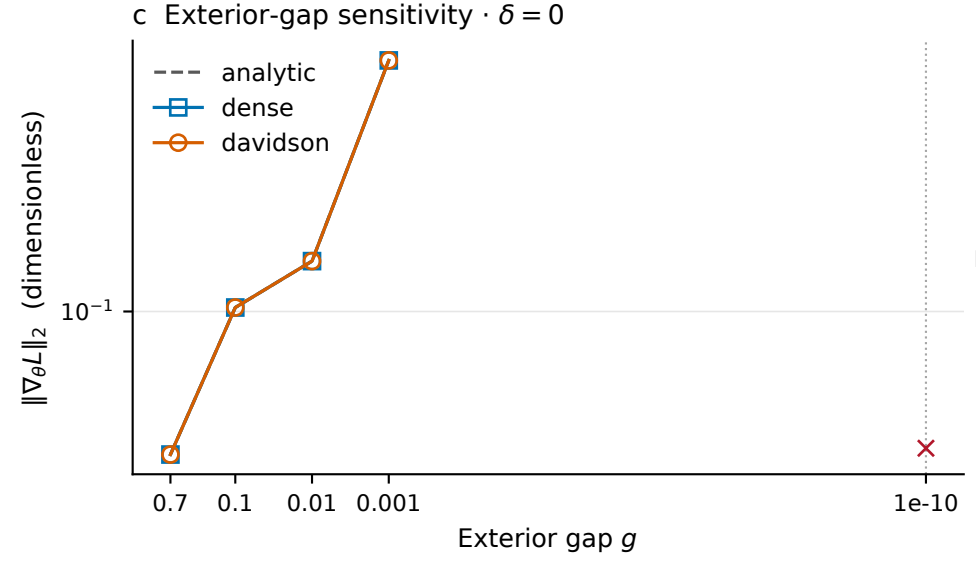
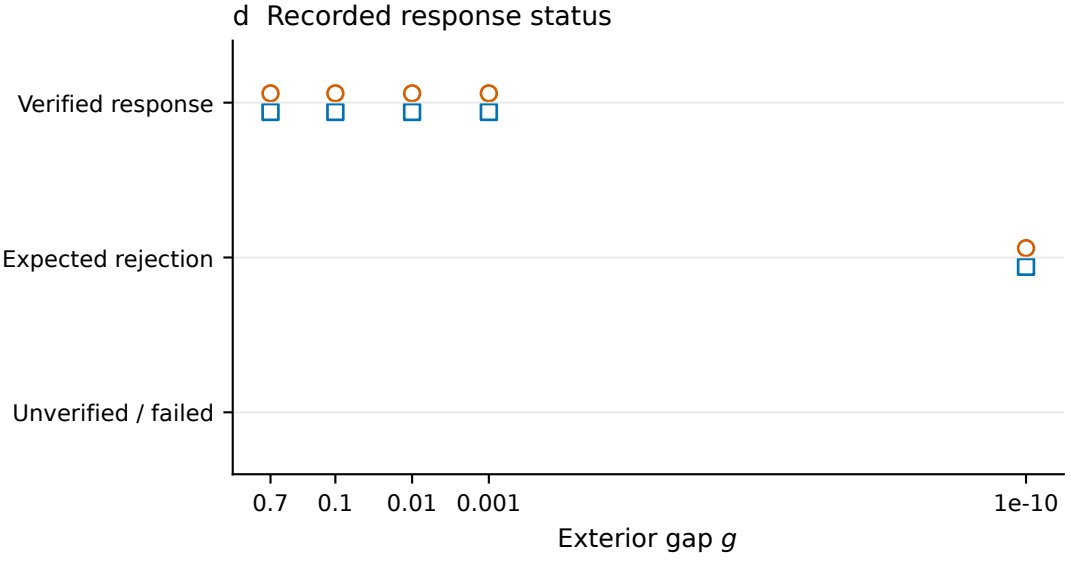
Complete degenerate-subspace response · n = 1024, k = 4
Internal degeneracy is compatible with a smooth projector; exterior isolation controls response









a: lines = analytic, markers = AD. Zero is shown explicitly; no internal-gap regularization.
Curves require complete/pass reports, converged/valid/pass cases, finite VJPs, and componentwise $|g_a - g_a^{\mathrm{analytic}}| \le 2 \times 10^{-7} + 2 \times 10^{-5}|g_a^{\mathrm{analytic}}|$. Excluded cases: 0; missing adjoint residuals: 16 (not plotted).
Source d0e419a50c; matching source/script/settings/environment. Other cohorts/dimensions omitted: 25 cases.
