Matching PBE and direct G₀W₀ material bands
Compact GTH-SZV / body-only finite models; no bulk convergence claim
Si · 113/114 converged QP values
GaAs · 114/114 converged QP values
GaN · 132/132 converged QP values
Graphene · 89/91 converged QP values
Matching PBE
Direct G₀W₀
Energy − each sampled VBM (eV)
Energy − PBE VBM (eV)
Separate valence references; raw energies retained
Computed points; lines guide the eye
QP valence reference incomplete; common PBE zero
