Water / Cartesian 6-31G*: one fixed 19-orbital reference
QP energy quadrature error
Maximum error / Hartree
Compared with 400 nodes
Declared target
Imaginary-axis nodes
QP residue quadrature error
Maximum error / dimensionless
Compared with 400 nodes
Declared target
Imaginary-axis nodes
QP window sensitivity
Maximum energy change / Hartree
G window
W window
Retained virtual orbitals
Tracked optical-state sensitivity
Maximum energy change / Hartree
G: TDA
G: FULL
W: TDA
W: FULL
OPTICAL: TDA
OPTICAL: FULL
Retained virtual orbitals
14 virtuals is the reused zero-error endpoint. Optical-only windows keep QPs identical.
All six optical states pass the declared tracking criteria.
