Formaldehyde · RHF/CIS · Cartesian 6-31+G*
S1 and the brightest of six retained roots; individual orbital/state phases are arbitrary

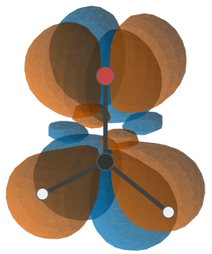

S1: Leading hole NTO

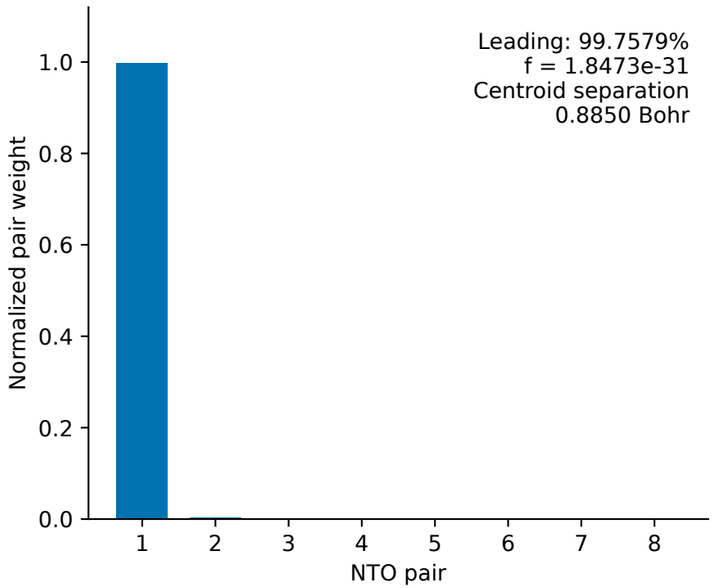

S1: Leading particle NTO

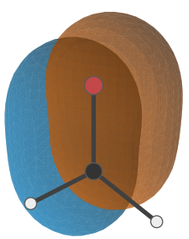

S1: Transition density

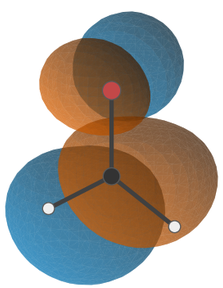

S1: all pair weights

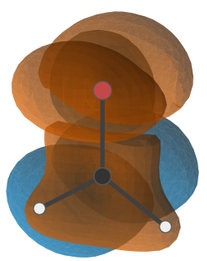

S4: Leading hole NTO

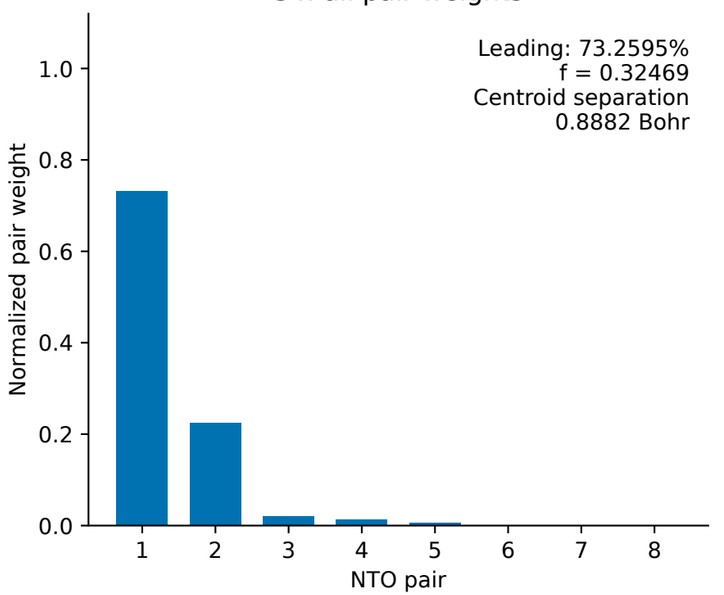

S4: Leading particle NTO

S4: Transition density

S4: all pair weights

Positive phase Negative phase

Orbital surfaces: ±0.05 Bohr$^{-3/2}$; transition density: ±0.003 e/Bohr³. Signs do not denote charge accumulation/depletion.
